

# ASI Dental Junction Boxes

MODELS: 90-1818, 90-1826, 90-1835

Make your utility connections disappear with our In-Wall, Above-Floor, and In-Floor Dental Junction Boxes for ASI dental delivery systems. ASI's specialty dental J Boxes helps manage the various tubing, wires, and cables going to your central utility, making it an ideal solution in your operatory to house and conceal your operatory plumbing.

## IN-WALL JUNCTION BOX – Model 90-1818

ASI's In-Wall Junction Box is ideal for dental delivery carts that are placed in the front/side delivery position for the dentist. These allow the cart to be placed back into the corner of the room to allow ingress/egress for the patient and then brought forward when the patient is reclined.

## IN-FLOOR JUNCTION BOX – Model 90-1835

The In-Floor Junction Box Version is generally used for front delivery carts. The box is placed ahead of the dental chair towards the patient's feet end. This allows the junction connection to somewhat concealed by the patient chair. The advantage of an in-floor box will provide a smooth transition from floor surface to the top plate of the junction box.

## ABOVE FLOOR JUNCTION BOX – Model 90-1826

The Above Floor junction box for the delivery system is typically located at the foot-base of the patient chair. This allows for the largest flexibility in cart placement for ambidextrous and storage uses.

Looking for more information on how to select the best dental junction box for your operatory read our article on **The Modern Dental Junction Box**.
